- Bahasa Indonesia
- Mandarin
- Malay
- French
- Vietnamese

## DID YOU KNOW?

Slow Lorises are the **ONLY VENOMOUS PRIMATES.**

They have a small bare patch under their arm that secretes oil, that when combined with saliva, creates a venom strong enough to kill small mammals and arthropods.

## FEEDBACK FROM VOLUNTEERS

“Nayli and the team have done a good job in preparing the slides and explaining how to spot the different species during the first session. **It was informative and I gained valuable knowledge regarding the illegal wildlife trade** and how to spot elephant ivory (schreger lines) as well as rhino horn products (skewed lines and pores) as a first timer.”

WHAT TO BE PART OF THE SOLUTION?
